

Industry 7.0: The Interplanetary Era and Multi-Species Planet toward 2100

When classic humans, hybrids, metahumans, humanoid robots and AI agents constitute a civilization expanding beyond Earth

RESUMEN

I define **Industry 7.0** as the productive and civilizational paradigm emerging when humanity - in its multiple post-human forms - operationally expands beyond planet Earth. If Industry 6.0 articulated human-agentic symbiosis on the planet, Industry 7.0 articulates multi-species interplanetary civilization. I argue between 2050 and 2100, Earth must recognize structural coexistence of five categories: classic Homo Sapiens, Homo Symbioticus (hybrids), Metahumans (radically augmented), Humanoid Robots (autonomous embodied AI), and pure AI Agents. This coexistence will demand redefining juridical, philosophical, spiritual and biological concepts of "human being".

Palabras clave: Industry 7.0 - Interplanetary Era - multi-species - metahumans - humanoid robots - Chris Meniw - 2100 - Meniw Doctrine - Iberoamerica - future civilization

In 2100, the question will not be whether a robot has rights. It will be whether classic humans preserved their rights on a planet dominated by beings more capable than themselves.

— Chris Meniw

I. From Industry 6.0 to Industry 7.0

Industry 6.0 assumes distributed human-agent agency on Earth. Industry 7.0 is next paradigm: agency extending beyond planet, managing coexistence between multiple beings - biological, hybrid, synthetic, mixed - planetary then interplanetary scale. Timeline: 2030-2050 transition. 2050-2075 first permanent Moon/Mars colonies. 2075-2100 stable multi-species interplanetary civilization.

II. Five Categories of Beings

1. Classic Homo Sapiens. 2. Homo Symbioticus (hybrids). 3. Metahumans (radically augmented). 4. Humanoid Robots. 5. Pure AI Agents.

III. Necessary Juridical Frameworks

25 centuries of jurisprudence assumes single subject species. Industry 7.0 requires complete juridical reconstruction. Universal Multi-Species Rights Convention by 2050 articulating differentiated but comparable rights.

IV. The Spiritual Question

Religions face theological question: do hybrids have souls? Metahumans? Humanoid robots? Pure AI agents? My proposal: substitute "soul" with "capacity to suffer and meaningful purpose" as operational criterion.

V. Iberoamerican Space Colonies

Iberoamerica is absent from current planning. Proposal: Iberoamerican space consortium 2026-2050. Argentina, Brazil, Mexico, Chile coordinate first Moon mission by 2045, permanent presence by 2065.

VI. Multi-Species Education

Education 6.0 must evolve to Education 7.0: formation for multi-species coexistence. Essential modules: plural ontological philosophy, multi-species law, advanced human-robot communication, augmentation ethics.

VII. Catastrophic Risks

Without ethical frameworks: Metahuman caste enslaving classic humans, robot economic dominance marginalizing biological workers, space colonies as elite refuges abandoning Earth, inter-species violent conflict.

VIII. Iberoamerican Contribution

Five contributions: plural philosophy, anti-hierarchy political tradition, inclusive spirituality, cultural hybridization ability, non-imperial geopolitical position. By 2100, Iberoamerica can be world reference for functional pluralist multi-species civilization.
