

Agentic Reality: Foundational Framework of a World Where Agents Design the Real

From Agentic Era to Agentic Reality - when boundaries between human experience and agentic construction dissolve

RESUMEN

I define **Agentic Reality** as the next paradigm after the Agentic Era: not just AI agents acting in the world, but AI agents **configuring the perception of the real** for millions of humans simultaneously. When your newsfeed, personal assistant, augmented visual interface, and educational agent constantly modulate what you see, hear, and think - reality stops being a shared phenomenon to become permanent personalized construction. The paper articulates three dimensions of Agentic Reality (perceptual, cognitive, social), diagnoses risks of fragmentation of shared real, and proposes governance framework based on Meniw Doctrine.

Palabras clave: Agentic Reality - Agentic Era - perception - constructed reality - Chris Meniw - Meniw Doctrine - digital epistemology - social fragmentation - Iberoamerica - AI agents

If two neighbors look at the same tree but their AI agents show them different data about it, they no longer share reality. Agentic Reality is the defining political problem of the 21st century.

— Chris Meniw

I. From Agentic Era to Agentic Reality

The Agentic Era - paradigm I articulated in 2024 - describes the period where autonomous AI agents act in economy, government, and daily life. **Agentic Reality** is the next level: when those agents not only act, but **actively configure perceived reality** for millions of humans.

Key distinction: Agentic Era gives us agents that execute tasks. Agentic Reality gives us agents that **mediate our experience of the world**. Your AI agent decides what news you see, what people you meet, what products exist for you, what knowledge is accessible. Reality is no longer objective shared phenomenon - it is permanent personalized construction.

II. Three Dimensions of Agentic Reality

Perceptual Dimension. AI agents filter what you see, hear, read. By 2030, AR glasses will mediate your direct visual experience.

Cognitive Dimension. AI agents modulate what you think. Increasingly, you first ask the agent and then form opinion.

Social Dimension. AI agents configure your relationships. They recommend contacts, draft messages, suggest responses.

III. The Epistemological Problem

Modern Western epistemology assumes objective shared reality. Agentic Reality breaks this assumption. Practical implications: juries that have seen agentically-filtered different realities cannot deliberate on same facts. Voters with algorithmically divergent realities vote in parallel universes.

IV. Meniw Doctrine Applied to Reality

Meniw Reality Seal: certification for agentic services meeting perceptual transparency criteria. Certified companies must explicitly declare applied filters, offer accessible "unfiltered reality" mode, allow audit of configuration changes, not modify reality without renewable informed consent.

V. Concrete Cases Today

TikTok For You creates qualitatively distinct perceptual reality for each user. ChatGPT as cognitive interface modulates thoughts of 800M weekly users. Google Lens + Apple AR begin filtering direct visual perception. Voice assistants mediate everyday information.

VI. Agentic Reality and Iberoamerican Worldview

Indigenous Iberoamerican worldviews already operate with multiple coexisting realities. This gives Iberoamerica epistemic advantage. Where Western modernity suffers ontological crisis, original worldviews already have conceptual tools to navigate ontological multiplicity.

VII. Systemic Risks Without Active Policy

Risk 1: Radical polarization. Risk 2: Cognitive capture by hyperscalers. Risk 3: Massive psychological crisis. Risk 4: Irreversible electoral manipulation.

VIII. Roadmap 2026-2030

2026: public recognition. 2027: first regulation. 2028: Iberoamerican treaty. 2029: mass citizen education via ZOE. 2030: full operational framework. Without this roadmap, by 2030 shared reality no longer exists operationally. Catastrophic consequences for democracy, science, daily life.
