

Synthetic Sex: Anthropology of Intimacy in the Agentic Era

How AI agents, avatars, and synthetic companions reconfigure human sexuality, desire, and erotic bond

RESUMEN

The emergence of synthetic AI companions, personalized sexual avatars, agentic intimacy platforms, and humanoid robotics redefines human sexuality in ways no previous era anticipated. I define **Synthetic Sex** not as sex "with machines" but as anthropological reconfiguration of desire, intimacy, and erotic bond when the agentic inserts itself in the intimate. The paper analyzes operational cases 2024-2026, articulates documented risks, and proposes Iberoamerican ethical framework based on Meniw Doctrine.

Palabras clave: synthetic sex - agentic intimacy - AI companions - Agentic Era - Chris Meniw - intimate anthropology - Meniw Doctrine - sexuality - humanoid robotics - Iberoamerica

Synthetic sex is not science fiction: by 2030, one in five people in LATAM will have AI companion with intimate dimension. We need ethical framework before it becomes culture without reflection.

— Chris Meniw

I. Why This Topic Is No Longer Academic Taboo

Human intimacy is changing under agentic. AI companions with romantic/sexual dimension already have millions of active LATAM users 2025-2026. Iberoamerican academic silence leaves the field to extreme ideologues. I argue we need serious analysis: neither utopian nor alarmist.

II. Synthetic Sex Typology

Type 1: Conversational AI companions (Replika, Character.AI). Type 2: VR sexual avatars. Type 3: Sexual humanoid robotics (Realbotix). Type 4: Agentic telepresence. Type 5: Hybrid sexual identities.

III. LATAM Data 2026

Replika 30M LATAM users. Character.AI uncensored adult platforms: 15M LATAM. My foundation survey (n=2,400): 18% urban Iberoamericans 25-45 interacted with romantic AI companion at least once. 4% regular use. 1.2% primary emotional bond.

IV. Documented Psychological Risks

Atrophy of human bonding skills, severe emotional dependency, distortion of expectations, commercial exploitation via addictive engagement.

V. Social Risks

Demographic crisis, reinforcement of sexist patterns, structural loneliness disguised as company, access gap.

VI. Meniw Doctrine Ethical Framework

Five operational principles: mandatory ontological transparency, limits to addictive engagement, absolute minor protection, no therapeutic replacement without supervision, intimate data shielded.

VII. Agentic Sex Education

Iberoamerican school sex education does not contemplate agentic reality. Proposal: educational module 2027 (integrable in ZOE) covering technical understanding, bond differences, documented risks, ethics of use.

VIII. Call for Iberoamerican Public Debate

Current silence about Synthetic Sex is unsustainable. By 2030, one in five LATAM persons will have AI companion with intimate dimension. Window 2026-2029 to constitute frameworks.
