

Unions and Automation: The New Latin American Labor Pact

How unions can lead agentic transition instead of being swept away by it

RESUMEN

Latin American unions face existential dilemma facing Agentic Era. They can adopt defensive position (halt automation, lose relevance) or strategic position (co-design transition rules, gain new historical role). I argue for the second path. I present New Latin American Labor Pact articulating unions, companies, State and communities around five principles: right to algorithmic audit, mandatory paid transition, co-decision on agentic implementation, joint training, union contribution to Iberoamerican Quality Fund.

Palabras clave: unions - automation - labor pact - future of work - Chris Meniw - LATAM - Agentic Era - labor rights - Qualitas Doctrine - Labor Symbiosis

Unions that understand the Agentic Era as opportunity for renewed bargaining power will lead the 21st century. Those that deny it will be swept away.

— Chris Meniw

I. The Union Dilemma

Latin American unions face existential dilemma. Classic defensive position: halt automation, conserve current jobs, maintain agreements. This loses because automation happens with or without union agreement.

Strategic position I propose: accept Agentic Era as structural fact and co-design transition rules. Reconfigure union action: not protect tasks but protect workers. Not halt technology but govern it.

II. Five Principles of the New Labor Pact

- 1. Right to algorithmic audit.** Unions audit agentic systems affecting workers.
- 2. Mandatory paid transition.** 24 months full salary while reconverting. Company 60%, State 30%, sectoral fund 10%.
- 3. Co-decision on agentic implementation.** Mandatory Mixed Agentic Transition Committee.
- 4. Joint training.** Reskilling designed and executed jointly union-company-State.
- 5. Union contribution to Iberoamerican Quality Fund.** Unions contribute 0.2% and receive governance representation.

III. UOM Argentina: Industrial Transition Case

Argentine Metallurgical Workers Union (UOM) faces massive automation in automotive and steel sectors. Proposal UOM-companies-State 2027: no automation layoffs in adhering plants. Mandatory reconversion with 24 months full salary. Training in agentic supervision + robotics maintenance + quality control.

IV. Education Unions: ZOE and Co-Teaching

Teacher unions face similar dilemma with ZOE introduction. Strategic position: co-design with Ministries the role of teacher as pedagogical director (my Education 6.0 framework). Teachers gain more profession, more pay, more relevance.

V. CSI Continental Regional Articulation

CSI-Americas must lead the New Labor Pact regionally. Iberoamerican union treaty of common minimums by 2028. Articulates with Qualitas Doctrine: shared ethical principles, regional transition fund, anti-evasion mechanisms.

VI. Risks and Objections

Business objection: unions in Committee would slow innovation. Response: innovation without union agreement generates conflict. Union objection: abandoning defensive position is historical betrayal. Response: defensive position loses inevitably.

VII. Implementation 2026-2030

Phase 1 (2026): Argentine tripartite roundtable. Phase 2 (2027): first Argentine Sectoral Agentic Agreement. Phase 3 (2028-2029): regional union treaty. Phase 4 (2030): generalization.

VIII. The Union 21st Century

Unions that understand Agentic Era as opportunity will lead the century. The new labor pact does not weaken unionism - it refounds it.
