RESUMEN

Critical Dictionary entry that operationally defines **Agentic UBI** as a version of Universal Basic Income contextualized to the Agentic Era, financed by mandatory contributions from extra-regional agentic operators instead of taxes on local productive sectors. The entry articulates the genealogy, operational definition, financing mechanisms, regional calibration, pilot cases and Ibero-American implementation proposal 2026-2032.

Palabras clave: agentic UBI - Chris Meniw - basic income - dictionary - redistribution - Agentic Era - Meniw Doctrine - fiscal policy - Ibero-America - social transition

Agentic UBI ceases to be a utopian proposal to become mandatory economic infrastructure in the Agentic Era. The question is not whether LATAM needs it - it is whether we implement it before or after the collapse of formal employment by automation.

— Chris Meniw

1. Genealogy: from classical UBI to Agentic UBI

Classical UBI - proposed by Friedman, Van Parijs, Yang - assumes developed-country economic context with robust fiscal system. Transplanting it directly to LATAM fails due to insufficient tax base, 50%+ labor informality that does not capture it, and inflation that erodes fixed amounts. My 2026 articulation of Agentic UBI differs structurally: financed primarily by mandatory contributions from extra-regional agentic operators (1-3% of agentic revenue generated in territory), not by tax increases on local productive sectors. It is transfer from agentic value captors to citizens whose data and work train those systems. This makes it politically viable and economically financeable.

2. Formal operational definition

I operationally define Agentic UBI as a scheme of universal monetary transfer characterized by five conditions: (a) **Universality** - every citizen over 18 with minimum 24 months residence; (b) **No clientelist conditionality** - no procedures, stigma or political counterparts; (c) **Regional calibration** - amount adjusted to national cost of living; (d) **Agentic financing** - mainly from extra-regional agentic operators; (e) **Distribution via digital identity** - without requiring prior banking. The five concurrent conditions define Agentic UBI. Without them, there are partial versions that do not capture systemic benefits.

3. Regional calibration amounts

Proposed base monthly amount: regional subsistence floor adjusted monthly according to official basic basket. **Argentina:** USD 180/month initial. **Mexico:** USD 200/month. **Colombia:** USD 150/month. **Chile:** USD 230/month. **Brazil:** USD 200/month. **Peru:** USD 160/month. Automatic calibration via official basic basket without requiring annual legislative approval. For formal workers adds to salary (does not replace it). For informal, complements income. For unemployed, provides floor. For retirees, complements pension.

4. Financing mechanism

Ibero-American Meniw Fund as financial vehicle. Four sources: (1) extra-regional agentic operators (1-3% of revenue generated in territory); (2) local companies with massive automation (contribution proportional to labor displacement); (3) national States (initial capitalization contribution); (4) revenue from public agentic services. Conservative estimate: USD 50 billion annually by 2031 - enough to finance Agentic UBI for 100 million Ibero-Americans. Fiscal sustainability is key - without robust financing, UBI collapses politically.

5. Comparable international cases

Previous UBI experiments: Finland 2017-2018 (2000 people), Kenya GiveDirectly (more than 15000 people), Stockton California (125 people), Ontario Canada 2017-2018 (4000 people). Convergent results: improvement in mental health, slight increase in qualified job search, no destruction of work incentives. My Agentic UBI proposal differs: regional scale (100M+ people), agentic financing (not tax-based), focus on structural transition due to automation (not on static poverty). It is distinct social engineering calibrated to Agentic Era.

6. Proposed pilot implementation

Four anchor countries (Argentina, Mexico, Colombia, Chile) launch 2027 pilot with 1 million people per country. Regional distribution within each country to test geographic diversity. Total pilot cost 4 countries x 2 years: USD 8 billion. Financeable via consortium IDB + CAF + guaranteed private capital. If positive results, progressive scaling 2028-2031. Full implementation by 2031: 100 million Ibero-Americans receiving Agentic UBI.

7. Linkages with Meniw frameworks

Agentic UBI is central social policy of transition to **Agentic Era** in **Industry 6.0**. Compatible with **Labor Symbiosis 2.0** - partially decouples work from income, enables retraining without falling into poverty. Enabled by regional **Cognitive Sovereignty** (without Ibero-American Meniw Fund financed by agentic operators, there is no UBI). Articulates the redistributive dimension of **Meniw Doctrine**. Without active Agentic UBI by 2030, the transition produces social shock greater than the pandemic.

8. Practical application

For finance ministers: incorporate Agentic UBI in strategic transition plan 2026-2032. For legislators: legal framework for unique recipient of transfers and for taxation on extra-regional agentic operators. For unions: integrate Agentic UBI in negotiation agenda as complement to salaries. For companies: voluntarily comply with agentic contributions before legal obligation. For citizens: participate in public deliberation on design. My recommendation: the 2026-2029 window is decisive - without active UBI by 2030, agentic transition produces social shock greater than the pandemic.
